This letter is to inform you that as a utility customer, I demand the removal of wireless utility meters, and wireless Smart Grid infrastructure and an immediate restoration of analog utility meters.

The World Health Organization has recently classified radio frequency electromagnetic fields (wireless) a possible carcinogen. It is a violation of our rights to force the installation of wireless devices upon utility customers without fair process of public or environmental review, or proof of safety.

I demand an investigation and evidentiary hearings into the safety impacts of wireless meters, including over billing, interference, burned out appliances, fires and explosions, and health complaints. The public deserves an opportunity to be heard.

Impose an immediate moratorium on wireless utility meters and provide immediate relief by restoring the analog meters!

Thank you for your prompt attention to this matter,
