

Smart Meters are costing us money, privacy, and our health and safety.

Sebastopol has asked for a moratorium on Smart Meters *twice*. The CPUC is currently evaluating a Smart Meter opt-out program that includes communities. However, PG&E is now installing Smart Meters throughout Sebastopol.

PROTECT YOUR ANALOG METERS!

Smart Meter complaints include: *skyrocketing utility bills, privacy invasion, vulnerable to cyber attack, interference with security systems and other wireless devices, burned out appliances, explosions, fires, health problems including headaches, tinnitus, sleep and heart problems, anxiety, nausea, and other health symptoms following installation.*

Smart Meters monitor the details of your electric usage and transmit that data from meter to meter in a mesh network, using wireless radiation, classified as a possible carcinogen by the World Health Organization (same as DDT and lead).

Smart Meters don't save energy and they are not good for the environment!

You have a choice. If you still have analog meters, you can attach the sign on back of this flyer to your meters to state you do not consent. You can also sign up with PG&E to opt-out, however at this time they're charging fees. The costs are under evaluation at the CPUC, and many are calling for a no fee opt-out. If you have Smart Meters you can call **PG&E 1-866-743-0263** to have them removed.

Smart Meter installers tend to leave when questioned. They drive white Ford Ranger trucks with a green "Wellington Energy" logo on the driver's door. They might also use PG&E trucks. Call us if you see installers in Sebastopol 824-0824
