

Stop cell towers on every block!

Senate Bill 649 would force installation of radiation emitting cell towers into neighborhoods and countrysides throughout California. How many? Likely one every couple hundred feet. If SB 649 passes you could awake in 2018 with a cell tower right outside your bedroom window.

- **SB 649 would eliminate local control and public input.** Cities would have no recourse to remove a tower even if every resident complained.
- SB 649 would allow unlimited access to deploy **refrigerator-size** cell tower equipment on utility and light poles, and sidewalks with no safety oversight.
- Peer-reviewed published science shows **radiation is harmful** to people, nature, trees, birds, and bees. Children are especially vulnerable. www.bioinitiative.org
- **216 cities, 34 counties, and organizations representing millions of Californians oppose SB 649:** AARP, Environmental Working Group, California Communities Against Toxics, California League of Conservation Voters, Sierra Club California, Teens Turning Green, The Utility Reform Network, Daily Acts, Mom's Across America, Physicians for Safe Technology, Baby Safe Project, and more!

**Ask your California Assembly member
and Senator to vote NO on SB 649!**
