WARNING

POSSIBLE FUTURE SITE OF A 5G SMALL CELL INSTALLATION

5G-enabled small cell antennas are a source of constant radio frequency microwave radiation (“wireless radiation”). Studies show chronic exposure can cause cancer, neurological problems and other serious health effects. This antenna will emit radiation whether nearby residents subscribe to the service or not. The only way to turn it off is not put it in. For more information and to help stop the deployment of these and other small cell antennas in our neighborhoods, visit 5Gcrisis.com.
